Premium Money

Merchant Activation Guide (v2.0)

Overview

This guide provides step-by-step instructions to activate the merchant functionality for your account. Follow these steps to generate API keys, create payment links, and verify transactions.

Step 1: Generate API Key with Merchant Permissions

1.   Log in to your account and navigate to the API Key management section.

2.   Create a new API key with Merchant permissions.

3.   Add your **Merchant Base URL** to the API key settings.

Step 2: Create a Payment Link

Endpoint: Create Payment Link

Method: POST

URL: /api/v2/PaymentLink

Request Headers:

•   ApiKey: Your generated API key.

Request Body:

```
{
  "TrackId": "{UUID}",
  "Amount": {amount}
}
```

Note:

- TrackId must be a **UUID v4**.

- The Amount specifies the transaction value.

Response:

```
{
  "Amount": {amount},
  "TrackId": "{UUID}",
  "PaymentUrl": "{URL}",
  "ExpiryDate": "{ISO 8601 DateTime}"
}
```

Important: The response will include an expiry date for the payment link.

Step 3: Handle Payment Callback

Once the user completes the payment, a callback will be sent to:

Callback URL: /premium-payment?TrackId={UUID}

Method: GET

You should **verify the payment** before processing the order.

Endpoint: Check Payment Status

Method: GET

URL: /api/v2/Payment

Request Parameters:

- TrackID: UUID of the payment.

Request Headers:

- ApiKey: Your generated API key.

Example Response:

```
{
  "TrackId": "{UUID}",
  "Amount": {amount},
  "Asset": "{currency}",
  "CreatedAt": "{ISO 8601 DateTime}"
}
```

Final Steps

1.   If the payment status confirms **success**, proceed with delivering the product.

2.   Handle errors or expired payments accordingly.

Security Considerations

•   Always keep your **API key confidential**.

•   Use **UUID v4** for tracking transactions securely.

•   Verify responses to prevent fraudulent activities.
